## » PLASTICS ENGINEERED BY GEHR

GEHR, the third and fourth-generation family-owned and operated company, has been ranking amongst the global leading producers of thermoplastic semi-finished products for over 80 years. At our Mannheim headquarters and our branches all over the world, more than 250 employees produce and sell a wide range of extruded rods, sheets, tubes and profiles. Our independence, good partnership with our customers and absolute reliability are the basic pillars of our success.

Our semi-finished products are used in a great variety of products in the processing industry – e.g. mechanical engineering and apparatus engineering, chemical industry and aerospace industry. It goes without saying that we ensure compliance with the most restrictive norms for our products. The constant expansion of our portfolio is also of great importance to us. The latest example of this are the filaments for professional 3D printing sold under the brand name FIL-A-GEHR®.

## QUALITY AND INNOVATION

Decades of experience enable us to meet the highest quality standards and to keep offering new solutions to our customers. In our labs, our engineers continually bring existing process technologies to perfection. They develop new materials and dimensions, e.g. from renewable raw materials or with special properties made to suit the individual requirements. Often this is done in close cooperation with universities and other highly-esteemed scientific institutes such as the Fraunhofer Institute. We are certified according to DIN EN ISO 9001 (quality management), DIN EN ISO 14001 (environmental management), DIN EN ISO 50001 (energy management) and OHSAS 18001 (occupational health and safety management).

## GLOBAL PRESENCE

In addition to our headquarters in Mannheim, we produce and sell a comprehensive product range of thermoplastic materials in our plants in Germany as well as in our branches in Italy, USA, India, China and Hong Kong. Our core competence lies in sheets, tubes, profiles and round rods up to 700 mm. Our warehouses are designed for large inventories. This guarantees a rapid commissioning and shipment to our customers. Anytime and anywhere.

## TAILOR-MADE SERVICE

For us, service goes far beyond delivery reliability: our experts are available to find solutions for all kinds of complex application-related challenges. Quick and straightforward.

Also, we are offering individual post-processing of sheets and rods to suit the corresponding application. Our services include:

- » Offcuts of sheets and rods
- » Planing (milling) of sheets
- » Centerless grinding of rods

We offer seminars on numerous topics for different target audiences in our training centre or if requested at the customer's facilities.

## SUSTAINABILITY AND SOCIAL RESPONSIBILITY

Environmental protection and sustainability are of particular importance to us. Therefore, our product portfolio comprises ECO-GEHR® semi-finished products which are based on renewable raw materials and have a positive carbon footprint. By the way, we have changed over to a 100 % green electricity supply for the production in our main production plant.

We also take social responsibility very seriously. Our social responsibility activities include the support of institutions of higher education and of young academic talents. Sponsoring regional projects is of great importance to us. For us, global presence and local commitment are not mutually exclusive.

## CRITICAL FOR SUCCESS – THE HUMAN FACTOR

Our success and our innovative capacity can only be ensured with highly-qualified employees. Therefore we continually invest in their training and competence. We lay the foundation for an excellent future by offering seminars, further training courses and symposia in our training centre. For us, an excellent future means continuing to meeting our customers' requirements with 100 % passion and top product quality.

» **FIL-A-GEHR®**

## FIL-A-GEHR® FILAMENTS

We have expanded our extruded plastic semi-finished products portfolio. As of now we offer plastic filaments for professional 3D printing under the brand name FIL-A-GEHR®. The low-emission and low-odour filaments are produced from high-quality raw materials with close tolerances (+/- 0,05 mm) and allow therefore a precise and failure-free 3D printing. FIL-A-GEHR® filaments are compatible with all standard 3D printers and are delivered carefully spooled and packed in easy to use aluminium-laminated resealable zip bags.

### Properties FIL-A-GEHR®

- » Extremely close tolerances
- » Filaments made of high-quality raw materials
- » Low-emission and odour free
- » Shrinkage-free
- » Good layer adhesion
- » Optimal flow behaviour while printing
- » Carefully spooled and packed in easy to use aluminium-laminated resealable zip bags

## FIL-A-GEHR ABS®

FIL-A-GEHR ABS® is a high-quality thermoplastic polymer with excellent mechanical properties. After-treatment or surface treatment can easily be applied to components made of FIL-A-GEHR ABS®. The components are specifically suitable for the production of small or mid-sized objects, functional prototypes or parts and thermostable items.

### Properties FIL-A-GEHR ABS®

- » Low-emission and low-odour
- » FIL-A-GEHR ABS® compliant to European Toy Safety Norm EN71-3
- » Raw material ABS has food contact and medical approval
- » High stability and impact strength
- » Heat resistant up to approx. 100 °C (212 °F)
- » Easy after-treatment or surface treatment

### Applications FIL-A-GEHR ABS®

- » Small and medium-sized objects
- » Functional prototypes
- » Thermostable parts e.g. model making

## FIL-A-GEHR PLA®

FIL-A-GEHR PLA® is made by NatureWorks and consists of high-quality Ingeo™ biopolymer. It stands out for its great dimensional stability, its high level of stiffness as well as its high elastic modulus. Long-term tests have shown that embrittlement on the coil does not occur. Reduced energy consumption and low nozzle temperatures while printing are other advantageous properties of this material. Furthermore, it can be printed without a heated bed.

Recommended by  

### Properties FIL-A-GEHR PLA®

- » High dimensional stability
- » Very good layer adhesion
- » No embrittlement on the spool (Long term flexural test)
- » Raw material PLA has food contact and toy safety approval
- » High stiffness/high modulus of elasticity (3.380 MPa)

### Applications FIL-A-GEHR PLA®

- » Very large products
- » Dimensionally stable products e.g. molds for cast-bronze
- » High precision temporary parts

## **NEW** FIL-A-GEHR PC/ABS®

FIL-A-GEHR PC/ABS® combines the properties of two exceptional FDM thermoplastics: the high impact strength and heat deflection temperature of PC with the high toughness at low temperatures and the good processability of ABS. The surface is ideal for painting and adhesive bonding.

### Properties FIL-A-GEHR PC/ABS®

- » Optimized flow behaviour
- » Heat deflection temperature between 110 °C (230 °F) and 135 °C (275 °F).
- » High notch impact strength values over wide temperature range
- » High dimensional stability
- » Low susceptibility to warping

### Applications FIL-A-GEHR PC/ABS®

- » Housing components
- » Power tools prototypes
- » Automotive industry
- » Connectors and switches

## FIL-A-GEHR PPA®

FIL-A-GEHR PPA® is a particularly stiff and hard material. Thanks to its high levels of stability and hardness and its high continuous operating temperature, the material is mainly used as metal replacement, e.g. in the engine compartment. The stiff material is particularly suited for 3D printing; different from carbon fibre filled materials, the print nozzles do not wear. Material distortion is minimal in 3D printing.

### Properties FIL-A-GEHR PPA®

- » High stiffness, modulus of elasticity (3000 MPa)
- » Very high stability (Tensile Stress at Yield 100 MPa)
- » Very good layer adhesion
- » High hardness level
- » Low warpage
- » Heat resistance up to approx. 105 °C

### Applications FIL-A-GEHR PPA®

- » Replacement for metal and carbon fibre filled PLA
- » Components in the engine compartment
- » Fittings for water pipes / water meter housings

## FIL-A-GEHR PA 12®

Compared to other polyamides, FIL-A-GEHR PA 12® has a low moisture absorption which is beneficial for failure-free 3D printing. The excellent chemical resistance, in particular against fuels and antifreeze agents, in combination with the high impact strength of the material, justifies the material's application e.g. in fuel or coolant pipes in the automotive industry. Its very low susceptibility to distortion combined with very good layer adhesion and low processing temperature makes FIL-A-GEHR PA 12® the ideal material for 3D printing.

### Properties FIL-A-GEHR PA 12®

- » Excellent chemical resistance, in particular against fuels and antifreeze agents
- » Low moisture absorption / high degree of dimensional stability
- » High stability
- » Low wear / excellent sliding friction
- » High impact strength
- » High continuous operating temperature of 85 °C
- » Low susceptibility to distortion

### Applications FIL-A-GEHR PA 12®

- » Cooling water systems
- » Fuel pipes

## FIL-A-GEHR PEEK®

Polyetheretherketone ranks among the high performance thermoplastics thanks to its high melting point of 343 °C and its maximum continuous operating temperature of 260 °C. Its particular chemical structure makes PEEK largely stable against thermal and chemical damage and permits its usage inside the body. In case of fire, the smoke development of PEEK is the lowest of all thermoplastics; the material is therefore used in aviation. FIL-A-GEHR PEEK® is an experimental filament with a processing temperature of 375 °C in the heated chamber (180 °C). The material is specifically apt for use on 3D printers.

### Properties FIL-A-GEHR PEEK®

- » High stiffness, elastic modulus 3830 MPa
- » Resistance against many chemicals
- » Maximum continuous operating temperature 260 °C
- » Print temperature 375 °C
- » Chamber temperature 180 °C

### Applications FIL-A-GEHR PEEK®

- » Inside the body
- » Aviation

»PEEK

## GEHR PEEK®

Polyetheretherketone can be used at very high temperatures (about +260 °C) and it shows an extraordinary mechanical strength, toughness, hardness, flexural strength, torsional strength. PEEK exhibits excellent chemical resistance, very good dielectric properties up to +260 °C and a very good resistance to all kinds of radiation (even ultraviolet rays only lead to a slight yellow discolouration). PEEK is self-extinguishing properties according to UL 94.

## GEHR PEEK-MOD®

Reinforced with 10 % of each PTFE, graphite and carbonfibre. The very good friction, wear and tear properties makes this material the good choice for many applications with friction.

## GEHR PEEK-30GF®

Reinforced with 30 % glass fibre.

## GEHR PEEK-30CF®

Reinforced with 30 % carbon fibre.

## Properties GEHR PEEK®

- » Very high mechanical strength
- » Very high rigidity (also at low temperature)
- » Very high thermal stability
- » Very high creep resistance
- » Very high dimensional stability
- » Very high radiation resistance
- » Very high hydrolysis resistance
- » Relatively low notch impact strength
- » Low resistance to acetone

## Applications GEHR PEEK®

- » Bearing shells
- » Piston rings
- » Valve seats
- » Gears
- » Seals
- » Aviation
- » Cog wheels
- » Pump vanes
- » Fittings
- » Plug connectors for the chromatography
- » Wafer carriers
- » Semiconductor industry

**PPS**

## GEHR PPS®

The linear Polyphenylensulfide belongs to the semi-crystalline materials and offers a very high mechanical performance in conjunction with an excellent efficiency at the same time (usual operating temperature up to approx. +230 °C), high dimensional stability and creep strength. The LOI belongs to the highest of the Polymers. By the reinforcement with glass fibres strength is achieved, which is comparable with light metal. PPS closes the gap between the technical synthetics and PEEK with its strength and economy.

## GEHR PPS-40GF®

Due to the reinforcement of 40 % glass fibre PPS can reach a strength compared with light metals.

### Properties GEHR PPS®

- » Very high strength and rigidity
- » High hardness
- » High thermostability
- » High dimensional stability
- » Very high chemical resistance
- » Very good insulating properties
- » High weather resistance
- » High resistance to hydrolysis

### Applications GEHR PPS®

- » Pump parts
- » Fan parts
- » Impellers
- » Wheels
- » Valve balls
- » Parts in the fuel and automotive sector

» PEI

## GEHR PEI®

Polyetherimide has a high mechanical strength in connection with a good chemical and heat resistance (operating temperature up to +170 °C), good dimensional stability and creep resistance. Its unique torque strength permits the economical substitution of machined fabricated small parts from steel.

## Properties GEHR PEI®

- » Very high strength and rigidity
- » High creep resistance
- » High torque strength and hardness
- » High thermostability
- » High weather resistance
- » High radiation resistance against γ-rays
- » Self-extinguishing
- » Limited resistance to stress cracks

## Applications GEHR PEI®

- » Parts for electrical engineering
- » Parts for food industry
- » Parts for aircraft construction

**PPSU**

## GEHR PPSU®

Polyphenylensulfone is an amorphous material, with improved impact and hydrolysis resistance compared to PSU. The usual operating temperature is approx. +170 °C. The extremely high notch impact strength remains also after a heat aging.

### Properties GEHR PPSU®

- » High strength and rigidity
- » Very high impact strength (also at low temperatures)
- » Very good dimensional stability
- » Very high chemical resistance
- » High resistance to many kinds of radiation
- » Very good sterilising capability
- » Lower chemical resistance than comparable semicrystalline materials

### Applications GEHR PPSU®

- » Parts of microwave ovens
- » Blow dryers
- » Humidifiers
- » Food industry
- » Pump wheels
- » Insulators
- » Medical industry

**» PSU**

## GEHR PSU®

Polysulfone shows great thermal stability (from -100 °C to +160 °C). PSU possesses a high mechanical strength, very good dielectric properties, hydrolysis resistance and a high radiation resistance (permeable for microwaves). PSU has a low notch impact strength.

### Properties GEHR PSU®

- » High strength and rigidity
- » High impact strength (also at low temperatures)
- » Very good dimensional stability
- » High chemical resistance
- » High resistance to  $\beta$ -,  $\gamma$ -, x- and infrared radiation
- » High permeability of microwaves
- » Self-extinguishing
- » Good to sterilize
- » Mediocre resistance to stress crack
- » Not weather resistant

### Applications GEHR PSU®

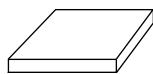

- » Parts of microwave ovens
- » Blow dryer
- » Humidifiers
- » Food industry
- » Pump wheels
- » Insulators
- » Medical industry

# » E-CTFE

## GEHR E-CTFE®

Ethylen-Chlorotrifluoroethylene exhibits an extraordinary impact strength at temperatures ranging from -76 °C to +150 °C. A great part of the product properties attributes to the very smooth surface and differentiates HALAR® from other fluoropolymers. Due to the fact that E-CTFE is very pure, this material is being used to process chemicals and ultrapure water for the semiconductor industry. Also the permeation resistance to oxygen, carbon dioxide, chlorine gas and hydrochlorid acid is 10 to 100 times better than PTFE.

### Properties GEHR E-CTFE®

- » Extremely high impact strength (down to -76 °C)
- » Good insulation properties
- » Very good weather resistance
- » High resistance to radiation
- » Very high chemical resistance
- » Very good sliding properties
- » Physiologically harmless
- » High density
- » Limited protection against stress cracking at temperatures > 140 °C

### Applications GEHR E-CTFE®

- » Parts which come in contact with aggressive media (e.g. plant construction industry)
- » Lining of tanks, pumps, flanges, fittings, parts in centrifuges
- » Parts for ultra pure applications

**PVDF**

## GEHR PVDF®

Polyvinylidene fluoride shows a higher tensile strength, pressure resistance and dimensional stability than the related PTFE, but friction and insulation properties are lower. PVDF has a high mechanical strength and toughness at lower temperature and it's self-extinguishing. The operating temperature ranges from -30 °C to +150 °C. PVDF shows a high resistance to chlorine, bromine and high-energy radiation.

## GEHR PVDF-ELS® (ELECTRICALLY CONDUCTIVE)

PVDF with improved electrical conductivity.

Volume resistivity  $\leq 10^4 \Omega \times \text{cm}$ .

Surface resistivity  $\leq 10^4 \Omega$ .

### Properties GEHR PVDF®

- » High tensile strength
- » High mechanical strength
- » High rigidity (also at low temperature)
- » High chemical resistance
- » Very low water absorption
- » Good friction and wear and tear values
- » Self-extinguishing
- » High UV-resistance
- » Toxic fumes when burned
- » Relatively high coefficient of thermal expansion

### Applications GEHR PVDF®

- » Gaskets
- » Pumps
- » Rotation discs
- » Valves
- » Check valves
- » Extraction centrifuges
- » Fittings
- » Slide rails
- » Gear wheels

**» PC**

## GEHR PC®

Polycarbonate shows a high rigidity and an extreme impact strength. Also it has a high glass transition temperature and temperature resistance (approx. +130 °C). The operating temperature ranges from -60 °C to approx. +120 °C.

### Properties GEHR PC®

- » Extremely high impact strength
- » High mechanical strength
- » High dimensional stability
- » High temperature resistance
- » Good insulating properties
- » High resistance to radiation
- » Medium chemical resistance
- » Notch-sensitive and susceptible to stress crack formation
- » Hydrolysis-sensitive

### Applications GEHR PC®

- » Transparent parts where a high impact strength and simultaneously a high flexural strength is requested.

» PBT

## GEHR PBT®

The mechanical properties of Polybutylene terephthalate comprise hardness, stiffness, stability and toughness. In particular the material's extremely high toughness allows the use of self-tapping screws or inserts. The good sliding properties and the high dimensional stability also open up a wide range of possible applications. Very good results can be achieved in joining processes with two-component adhesives on the basis of e.g. epoxy resins or cyanoacrylates as well as silicones. Painting of the part or high vacuum coating of the component surface is also possible. The continuous operating temperature ranges from approx. -60 °C to +100 °C.

### Properties GEHR PBT®

- » High stability, stiffness and toughness, even at low temperatures
- » Good creep resistance
- » High surface hardness
- » Good polishability
- » High dimensional stability
- » Easy to metallize
- » Good sliding properties
- » Good electrical insulation characteristics
- » High resistance to chemicals
- » Easy to paint
- » Good UV and weather resistance
- » Sensitive to hydrolysis

### Applications GEHR PBT®

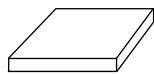

- » Components with metal inserts
- » Pump components
- » Housing components
- » Tank caps
- » Gear wheels
- » Insulating parts in electrical engineering
- » Applications with UV exposure

» PET

## GEHR PET®

Polyethylene terephthalate shows high tensile and mechanical strength, hardness and toughness, low friction and a high dimensional stability. Operating temperatures ranging from -20 °C to approx. +100 °C.

### Properties GEHR PET®

- » High mechanical resistance and tensile strength
- » High creep resistance
- » High surface strength
- » Easy to varnish and polish
- » High dimensional stability
- » High toughness
- » Good insulations for electrical properties
- » High chemical resistance
- » Easy to lacquer
- » Limited dielectric properties
- » Sensitive to hydrolysis

### Applications GEHR PET®

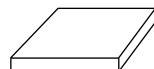

- » Bearings
- » Pumps and parts for housings
- » Frame components
- » Tank lids
- » Gear wheels
- » Insulators for the electrical engineering
- » Deflection rollers for the filament industry
- » Levers
- » Handles
- » Control discs

### GEHR POM-C® (ACETAL)

The continuous operating temperature of polyoxy-methylene ranges between -40 °C and +100 °C. The high surface strength is only surpassed by a few materials. POM shows good sliding properties and high resistance to wear and tear because of the high strength and smooth surface. There is a very low risk of stress cracks. POM-C (Copolymere) exhibits a high thermal stability and a high resistance to chemicals (high resistance to hydrolysis).

### GEHR POM-ELS® (ELECTRICALLY CONDUCTIVE)

Variant of POM (Copolymere) with an improved electrical conductivity.  
Volume resistivity  $\leq 10^1 \Omega \times \text{cm}$ ,  
Surface resistivity  $\leq 10^4 \Omega$ .

### GEHR POM-10PE®

Variant of POM (Copolymere) with improved sliding properties for tribological applications with an increased abrasion. The modified POM-10PE offers in particular additionally a food approval.

#### Properties GEHR POM-C®

- » Pressure tested quality
- » High strength and stiffness
- » High rigidity (to -40 °C)
- » High thermal stability
- » Low water absorption
- » High dimension stability
- » Good electrical insulating properties
- » Very good sliding properties
- » High resistance to solvents
- » Very high resistance to stress cracks

#### Applications GEHR POM-C®

- » Bearings
- » Fittings
- » Gear wheels
- » Parts for pumps
- » Screws
- » Bobbins
- » Parts for the textile industry
- » Carrier for coating lines
- » Food industry

**» PA**

## GEHR PA®

Polyamide shows a high thermostability (temperature resistant from -40 °C to approx. +100 °C) and high stiffness, hardness and toughness. These are some of the main characteristics. Due to the fact, that the good mechanical characteristics will be achieved only after conditioning, this material must be conditioned again after annealing. In addition, this conditioning occurs with a longer storage in air automatically.

## GEHR PA 6 C® (CAST)

Very stress-relieved and high-molecular PA 6.  
Properties similar to PA 6.

## GEHR PA 6 XT® (EXTRUDED)

Very tough (also in cold condition), high hardness.

## GEHR PA 6.6®

Polyamide with the highest hardness, rigidity, resistance to wear and heat deflection temperature.

## GEHR PA 6.6-30GF®

The 30 % glass fibre reinforced PA 6.6 has an improved dimensional stability, a very high stiffness and heat resistance that opens up further applications.

## ECO-GEHR PA 6.10®

This PA is obtained from the oil of the castor bean seed and is therefore based over more than 60 % on renewable resources.

## GEHR PA 12-TR®

Many components in optical applications can be realized by the transparency and the dynamic strength.

### Properties GEHR PA®

- » High strength and stiffness
- » High impact and notch impact strength
- » High heat deflection temperature
- » Shock-absorbing properties
- » Good sliding and dry running operating features
- » Good chemical stability against organic solvents and fuels
- » Size alteration by humidity absorption must be considered
- » Dimension stability, electrical and mechanical properties may become affected by water absorption

### Applications GEHR PA®

- » Bearing parts (good sliding properties)
- » Gear wheels
- » Pump parts
- » Sliding rails
- » Rollers (reduction of the noise level)
- » Fittings

### Properties GEHR PA 12-TR®

- » Transparency
- » Extremely dynamic strength
- » High chemical resistance
- » High stress-cracking resistance
- » Very high toughness
- » Good weather resistance

## GEHR PMMA XT® (ACRYL)

Polymethylmethacrylate is brittle and shows a good mechanical strength, tensile strength and hardness. PMMA is also scratchresistant and easy to polish. It shows a good temperature resistance and UV-stability. The operating temperature of PMMA ranges from -40 °C to approx. +70 °C.

### Properties GEHR PMMA XT®

- » Very high mechanical strength and hardness
- » High mechanical rigidity
- » Excellent transparency
- » Easy to polish
- » Good thermal stability
- » Good insulation properties
- » Low water absorption
- » Excellent weather resistance
- » Possible stress problems
- » Low chemical resistance
- » Brittle

### Applications GEHR PMMA XT®

- » Display
- » Signage
- » Advertisement
- » Food industry
- » Tubes for lamps
- » Automotive
- » Milk pipes
- » Hand rails

**» ABS**

## GEHR ABS®

Acrylnitrile Butadiene Styrene copolymer has a good thermal and dimensional stability and high impact strength (also at low temperature). It is hard, shows a good scratch resistance and has a good dimensional stability. ABS can be used in temperatures ranging from -50 °C to +70 °C.

## Properties GEHR ABS®

- » Good mechanical strength and stiffness
- » Scratchresistant
- » High surface strength
- » High impact strength
- » High dimensional stability
- » Not weather resistant
- » Limited resistance to acid and lyes

## Applications GEHR ABS®

- » Mostly applications where a high impact strength at low temperatures is requested
- » Model construction
- » Galvanized components

## GEHR PP®

Polypropylene shows a high mechanical and tensile strength, but a low notch impact strength. PP resists stress cracking and it is easy to weld. At minus temperatures it can become brittle. The chemical and electrical properties are very good. The continuous operating temperatures ranges between +5 °C and +100 °C.

## GEHR PP-30GF®

The 30 % glass fibre reinforced PP has an improved dimensional stability, very high stiffness and high heat resistance that opens up additional applications.

### Properties GEHR PP®

- » Low density
- » High heat resistance
- » High tensile strength
- » High surface strength
- » Very high chemical resistance
- » Low oxidation resistance
- » Low abrasion resistance
- » Brittle in the coldness
- » HF-welding not possible
- » Natural colour is not weather resistant

### Applications GEHR PP®

- » Pumps
- » Valves
- » Gaskets
- » Supporting stands for the coating industry
- » Spacer for the electroplating
- » Parts for toys

### Applications GEHR PP-30GF®

- » Brush and rollers manufacturing
- » Parts for pumps and valves
- » Housing for filtration
- » Parts for mechanical engineering

**» PE-UHMW**

## GEHR PE-UHMW®

The ultra high molecular weight Polyethylen has a high abrasion resistance (very good glide characteristics) and a high toughness at the same time. The chemical and crack resistance are optimum in comparison to the standard PE-HD. The operating temperature of PE-UHMW ranges from -150 °C to +90 °C.

### Properties GEHR PE-UHMW®

- » Low density
- » Very good wear resistance
- » Very high abrasion resistance
- » High toughness (also at low temperature)
- » High elongation at break
- » Very good electrical and dielectric properties
- » Very low water absorption
- » Low steam permeability
- » High chemical resistance
- » Good protection against stress cracking
- » Food safe

### Applications GEHR PE-UHMW®

- » Pumping and valve parts
- » Gaskets
- » Slide profiles
- » Parts for the food industry

**» PE-HD**

## GEHR PE-HD®

Polyethylen has a good chemical resistance to almost all acids, lyes, many organic solvents and hot water. PE has good insulation properties and is easy to weld. The operating temperature is from -50 °C to +90 °C.

## GEHR PE-ELS® (ELECTRICALLY CONDUCTIVE)

A variant of PE-HD with improved electrical conductivity.

Volume resistivity  $\leq 10^4 \Omega \times \text{cm}$

Surface resistivity  $\leq 10^5 \Omega$

### Properties GEHR PE-HD®

- » Low density
- » High toughness (also at low temperature)
- » High elongation at break
- » Very good electrical and dielectric properties
- » Very low water absorption
- » Low steam permeability
- » High chemical resistance
- » Good protection against stress cracking
- » Food safe
- » Soft surface (low tensile strength)
- » HF welding not recommended
- » Natural color is not weather resistant

### Applications GEHR PE-HD®

- » Transport containers
- » Pumps and valve parts
- » Parts in the tank construction
- » Components with medical applications
- » Gaskets
- » Sliding profiles
- » Components for the food industry

# » PVC

### GEHR PVC-U®

Polyvinyl chloride is a flame retardant material with an exceptional chemical resistance and also with lower stress cracking. PVC-U possesses high mechanical strength, tensile strength and a continuous operating temperature from -15 °C to +60 °C. It can also be easily glued and welded.

### GEHR PVC-TR®

PVC-TR is a transparent PVC-U which possesses a slightly diminished strength but simultaneously an increased toughness. The upper continuous service temperature is +60 °C. PVC-TR can be glued and welded like PVC-U.

### GEHR PVC-C®

High rigidity, strength and hardness at increased temperatures (+85 °C).

### Properties GEHR PVC-U®

- » High mechanical strength, tensile strength and hardness
- » Good insulation properties for electronics
- » High chemical resistance
- » Self-extinguishing
- » Low water absorption
- » Good adhesiveness and paintability
- » Low impact strength
- » In white colour weatherproof

### Applications GEHR PVC-U®

- » Pumps and valve body
- » Gaskets
- » Machine parts
- » Bearings cages
- » Hand lamp pipes
- » Brush basic body
- » Parts in the dental medicine
- » Seat strips
- » Profiles for cabin and fair construction
- » Lamp box

## » APPROVALS GEHR PVC-U®

GEHR PVC-U® round rods in dark grey up to a diameter of 160 mm are physiologically harmless:

### POTABLE WATER APPROVALS

GEHR PVC-U® round rods in dark grey meet the regulations of the German Environmental Protection Agency of 2005 (KTW) referring to cold water as well as the guideline of the DVGW according to the rules of DVGW technical regulations, spreadsheet W 270.

### FOOD APPROVALS

GEHR PVC-U® round rods in dark grey meet the norms (EU) No. 1935/2004 and 10/2011. Further, in this formulation we only use raw materials which are classified food safe and have an FDA approval.

GEHR PVC-U® Rods manufactured by GEHR USA have various NSF Certifications. Please contact us for further information.

»ECO-GEHR®

## ECO-GEHR® PLASTICS

stand for semi-finished products based on renewable resources. These sustainable materials possess regenerative raw material contents between 60 % to 100 % and hence a positive CO<sub>2</sub> balance. In addition to that ECO-GEHR® offers an alternative to the non-renewable resource crude oil. As a basis we use all sorts of organic materials such as sugar/starch, lignin, cellulose, castor, oil wood fibres. After polymerization these raw materials are adjusted by compounding so that they are suitable for the extrusion process on the existing machines.

## Applications ECO-GEHR® Plastics

- » Mechanical engineering
- » Display construction
- » Furniture industry
- » Toy industry
- » Playground equipment
- » Writing instruments
- » Instruments
- » Drumsticks
- » Billiard cues
- » Gear wheels
- » Slide rails

### **ECO-GEHR WPC-30PP®**

Wood Plastic Composite belongs to wood fibre reinforced plastics. The fibre content is approx. 70 %.

### **ECO-GEHR PA 6.10®**

is obtained from the oil of the castor bean seed and is therefore based over more than 60 % on renewable resources.

### **ECO-GEHR PLA-LF®**

is a blend of Polylactid acid, lignin, lignocellulosic, natural fatty acid, waxes and wood fibres. This material possesses good mechanical properties similar to ABS. This bioplastic has an operating range from -30 °C to max. +60 °C.

### **ECO-GEHR CL®**

consists of the wood components cellulose, natural fibres, lignin and fatty acids. It possesses a lot of interesting properties which, taken as a whole, remind very much of the natural material wood. Compared to naturally grown wood the advantages of ECO-GEHR® clearly lie in the homogeneity of the material.

---

#### **Properties ECO-GEHR WPC-30PP®**

---

- » Good mechanical strength
- » Weatherproof compared to wood
- » Antibacterial optional, UV-resistant

---

#### **Properties ECO-GEHR PA 6.10®**

---

- » Low water absorption in comparison to PA 6
- » High dimensional stability
- » Good chemical resistance

---

#### **Properties ECO-GEHR PLA-LF®**

---

- » Preparation from environmental friendly raw materials, thus physiologically harmless
- » PLA is biodegradable
- » Disposal by composting resp. incineration. Regional regulations need to be observed.
- » Good mechanical properties similar to ABS
- » High stiffness, modulus of elasticity up to 2800 MPa
- » Good resistance to polar media

---

#### **Properties ECO-GEHR CL®**

---

- » Bio-degradable material
- » Carbon footprint is largely neutral
- » Isotropic material structure
- » Disposal by composting resp. incineration (Regional regulations need to be observed)
- » Good mechanical properties
- » High stiffness/modulus of elasticity up to 4248 MPa

» ELS

## OUR ELECTRICALLY CONDUCTIVE MATERIALS

GEHR semi-finished products with the additional title ELS possess a reduced surface resistivity. This property will be applied wherever static charge of plastic components needs to be avoided.

In sensitive applications such as electronics voltages of over 100 volts are already sufficient to irreparably destroy circuits. In fire-hazardous facilities sparkovers may cause fires or even explosions.

» ELS  $\leq 10^6 \Omega$

**GEHR PE-ELS®**

Volume resistivity:  $\leq 10^4 \Omega \times \text{cm}$   
 Surface resistivity:  $\leq 10^5 \Omega$

**GEHR POM-ELS®**

Volume resistivity:  $\leq 10^1 \Omega \times \text{cm}$   
 Surface resistivity:  $\leq 10^4 \Omega$

**GEHR PVDF-ELS®**

Volume resistivity:  $\leq 10^4 \Omega \times \text{cm}$   
 Surface resistivity:  $\leq 10^4 \Omega$

**Properties GEHR PE-ELS®**

- » Low density
- » High toughness (also at low temperature)
- » Very low water absorption

**Properties GEHR POM-ELS®**

- » Variant with improved electrical conductivity
- » High toughness
- » Low water absorption
- » Easy to machine

**Properties GEHR PVDF-ELS®**

- » High tensile and mechanical strength
- » High chemical resistance
- » Self-extinguishing
- » UV resistance

## » SEMINARS BY GEHR

We are well aware of how important solid expertise is for the success of a company. Therefore we offer seminars to our customers and their employees which cover everything from basic knowledge about plastic materials over approvals up to special technical questions. The contents of our seminars include:

- » Plastic materials and their properties
- » Application examples
- » Ultrasonic inspections
- » Technical data
- » Approvals
- » Impact on dimensional stabilities

In addition to introductory and standard seminars, we also provide training courses tailored to specific requirements – if requested at the customers' facilities. All seminars can be conducted in German or English.

This table shows a list of regulations that GEHR semi-finished products are complying with at present, evaluation of the composition of materials compared with the corresponding positive lists and migration regulations. The suitability of above-mentioned regulations (e.g. regarding global migration) has to be checked on the finished part by the convertor or the distributor. The convertor or distributor takes the full responsibility. For a detailed statement regarding the topic "Physiology" please ask our Application Engineering Division at GEHR GmbH.

It is recommended to use only sharpened HSS tools (High Speed Steel).

- Due to the danger of stress cracking we don't recommend the use of cooling agents which are based on oil (or to clean the parts well after machining). Amorphous materials should be annealed during machining.
- To avoid treatment problems we recommend a heating up of the materials on approx. 120 °C. Use only sharpened tools with small feed.
- With these materials, close attention should be paid to the proper exhaust in machining area.

GEHR E-CTFE®	80	105	80
GEHR PSU®	145	165	145
GEHR PPSU®	140	200	140
GEHR PEI®	140	200	140
GEHR PPS®	150	200	150
GEHR PEEK®	140	200	140

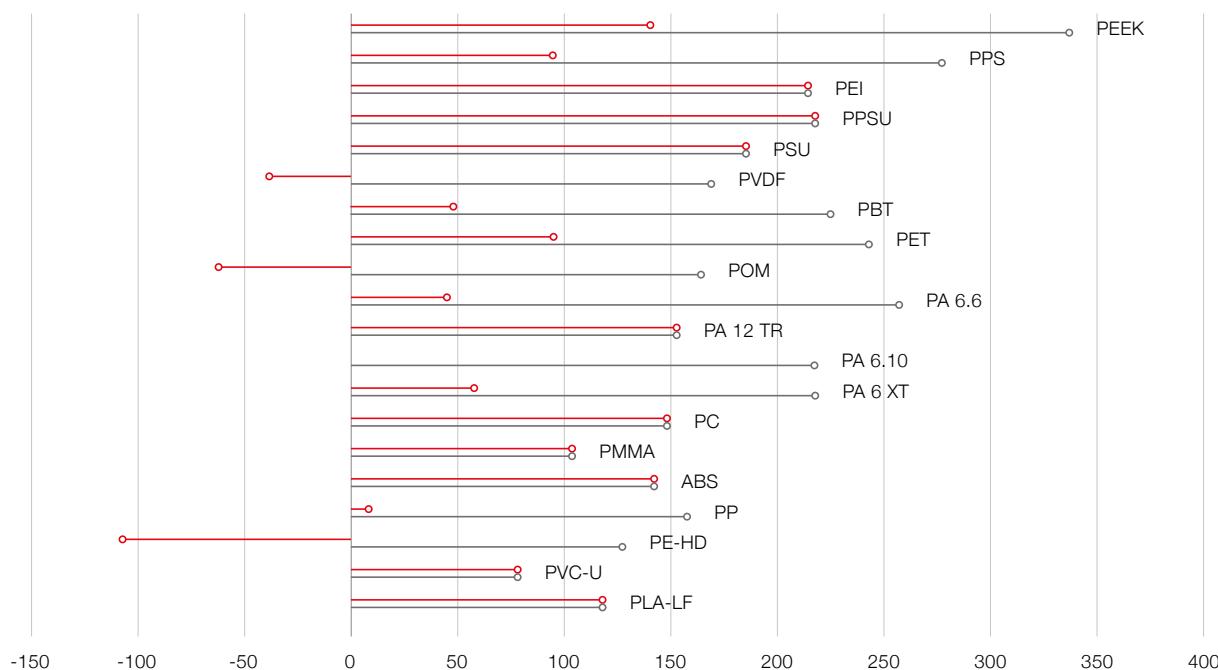

Calculation:

$${}^{\circ}\text{F} = \left( \frac{9}{5} \times {}^{\circ}\text{C} \right) + 32$$

$${}^{\circ}\text{C} = \frac{5}{9} \times ({}^{\circ}\text{F} - 32)$$

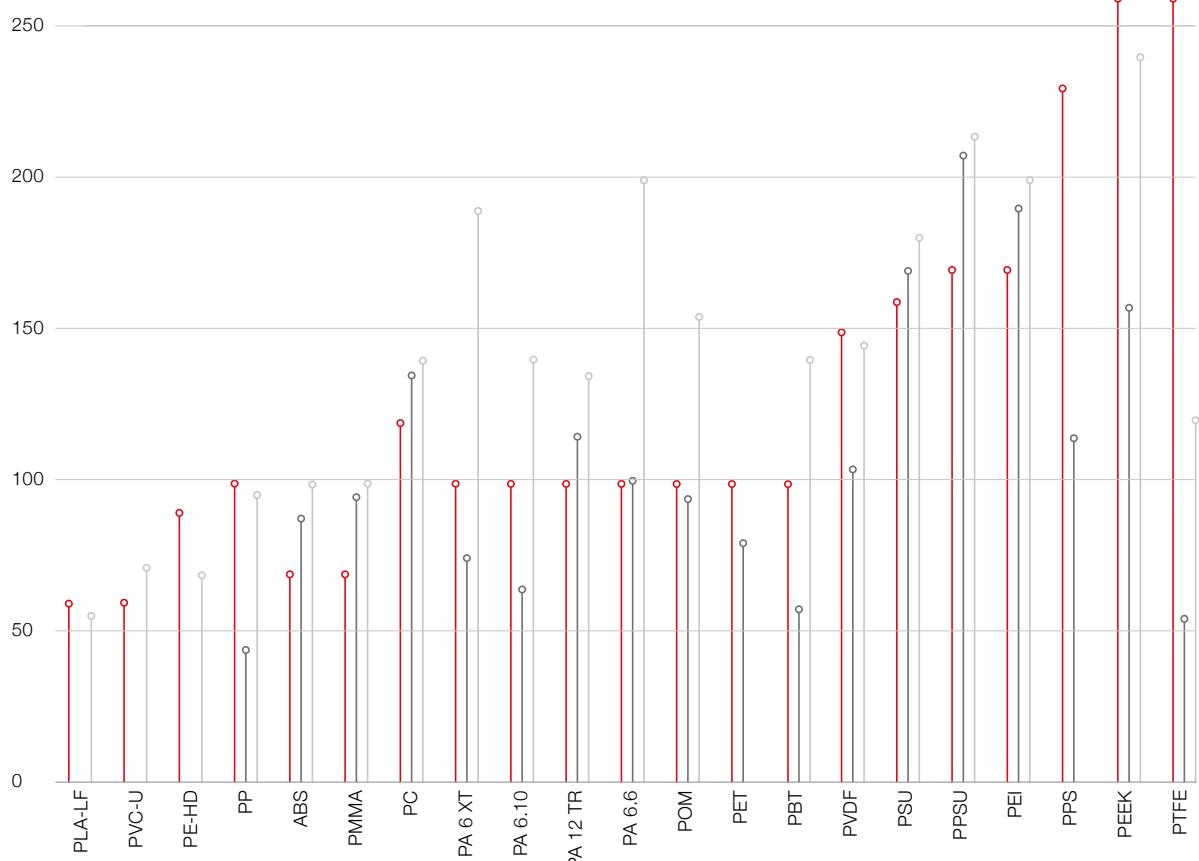

Despite all precautionary measures an uneven cooling speed in the production process of the semi-finished material might be inevitable; in this case internal tensions might occur. Likewise tensions can be conferred into the part by the machining process. These tensions can lead to the distortion and in the worst case even to the breaking of the part. To reduce the danger of distortion or breaking an annealing e.g. in air or in nitrogen is recommended, with an annealing time of min. 2 hours (4 hours are better) for each 10 mm wall thickness. To avoid additional tensions while heating or/and cooling down the material, these processes should be carried out very slowly. We recommend to use 3-times as much time for the cooling down as for the heating. The time of these processes has to be added to the regular annealing time.

5) Conformance to the requirements regarding physiological harmlessness generally applies to natural colour material and has in some cases been determined for the raw materials. Certifications for our semi-finished products are also available or in preparation. Please contact us for clarification.

6) Valid for nature coloured materials. An additional UV protection can be taken over by special pigments e.g. carbon black.

7) Test results without UL registration

8) Data are only valid for natural colours

9) Data taken from raw material

10) Self-assessment without test certificate

\* The figures indicated here are approximate values. They may be affected by the temperature, operating time, concentration and stress level of the component involved, by mechanical loads, etc., and the user is not released therefore from the obligation of performing checks and trials of his own. The values indicated here have been compiled on the basis of current experiences and findings. Any legally binding guarantee of certain properties, or any suitability for a specific application cannot be inferred from the present data.

+ resistant      o partly resistant      - non-resistant

## NOTES ON GEHR-DELIVERY PROGRAMME

### Stock item

(Product available from stock shipped from Germany)

### Custom extrusion on request

(Product can be produced on customer's request and based on minimum order quantity)

### Stock FIL-A-GEHR®

### Stock item USA

(Product available from stock shipped from USA)

All weights specified are based on average production weights. As a rule these are the invoiced weights, only High Performance Materials and welding rods will partially be invoiced by actual weight.

### Following DIN norms are being used for semi-finished materials:

- » Round Rods, Sheets, Hollow Bars: DIN EN 15860
- » Welding Rods: according to DVS 2211

Tolerances which are not mentioned can be offered on request.

The current version of our General Terms and Conditions can be found on our website [www.gehr.de](http://www.gehr.de).

We reserve the rights to make modifications and errors. Values are dependent on the diameters and can deviate.

GEHR makes no representations or warranties regarding the technical statements in this brochure. Desired capability characteristics are only binding if there is an explicit agreement when the contract is concluded.
